

SNEHA MUDUSU

+1(201-349-2311) | mudusu.sneha@gmail.com | <https://www.linkedin.com/in/sneha-mudusu/>

Professional Summary

Data Analyst with 3+ years of experience leveraging SQL, Python, and Tableau to deliver **actionable insights and drive data-driven decision-making**. Proven expertise in **data storytelling, stakeholder communication, and translating business needs into analytical solutions**. Skilled in **data cleaning, predictive modeling, and KPI reporting** to improve operational efficiency and support strategic initiatives.

Core Competencies

- Data Analysis & Data Storytelling
 - SQL, Python, R
 - Tableau, Power BI, Looker, Big Query
 - Azure Data Factory & Azure Data Lake
 - Data Cleaning & Data Manipulation
 - Predictive Modeling & Statistical Analysis
 - KPI Tracking & Business Metrics
 - Stakeholder Communication & Presentation
 - Cross-functional Collaboration
 - Excel (Advanced), PowerPoint
-

Professional Experience

Innovaram – Remote, United States

Data Analyst

Jul 2025 – Present

- Extracted, cleaned, and analyzed large datasets using SQL and Python to support data-driven business decision-making and improve reporting efficiency.
- Managed databases and UAT to identify code issues to ensure 99% data integrity and efficiency of technical systems.
- Developed and maintained ETL pipelines using Azure Data Factory, Azure Data Lake, SQL, and BigQuery to streamline enterprise reporting workflows along with data governance.
- Applied statistical analysis and predictive modeling techniques to identify trends and generate actionable business insights. Worked on problem solving and process improvement.
- Framed ambiguous business problems into structured analytical questions and delivered data-driven recommendations to stakeholders.
- Partnered with stakeholders to identify key business questions and translate them into analytical frameworks.
- Collaborated with cross-functional teams to implement data-driven recommendations. Measured impact of implemented solutions using KPI tracking
- Validated system output to ensure benefit language accuracy and alignment with drafting standards, regulatory requirements, and approved product configurations.
- Automated data extraction from multiple sources to streamline the organization and processing of complex information using Big Query and Looker.
- Leveraged data storytelling and strong stakeholder communication to translate complex data into actionable business insights and data-driven recommendations.
- Developed Tableau dashboards and PowerPoint presentations to communicate data insights to stakeholders, improving decision accuracy by 15–20%.

Success Academy Charter Schools – New York, United States

STEM Teacher

Nov 2024 – Jul 2025

- Delivered standards-aligned Computer Science instruction to scholars, focusing on computational thinking concepts such as logic, decomposition, and debugging and providing a vision and logic to text codes.
- Facilitated hands-on coding lessons using Python, Scratch, and Code.org while incorporating data analysis to help students work with real-world data.
- Managed school-wide digital instruction tools and provided technical support for classroom technology to streamline hybrid learning and digital assessments.
- Maintained organizational security and privacy standards while troubleshooting site-related technical problems using knowledge of internet layer protocols and project management.
- Increased student engagement by 35% through the implementation of project-based learning and the development of a system to track technical issues.

Tetra Computing – Remote, United States

Data Analyst

May 2024 – Nov 2024

- Developed and refined predictive models using Python and TensorFlow, achieving 92% accuracy to improve forecasting reliability.
- Developed Tableau dashboards and presented data-driven insights to stakeholders, enabling data-informed business decisions and improving operational efficiency and enabling performance tracking, which reduced manual reporting time by 25%.
- Utilized Excel (advanced functions, pivot tables) to analyze datasets and support reporting.
- Automated data cleaning and processing scripts using Python and streamlining analysis workflows.
- Conducted thorough data acquisition and performed quantitative and qualitative analysis to identify trends, support business insights, and guide strategic decision-making.
- Presented analytical findings to stakeholders using PowerPoint and data visualization tools to support business decision-making. Worked on relational databases (joins, index, ranks, ETL, QA, UT)
- Collaborated with cross-functional stakeholders to implement data solutions and improve data accessibility, reducing reporting errors by 20%.

Cognizaant Mind Consulting – Remote, United States

Developer

Aug 2023 – May 2024

- Assist in developing applications using React, and Python.
- Work with databases to support data flow and system integrations and model deployment.
- Designed and built a full-stack web-based inventory management system using React.js + Spring Boot.
- Developed and deployed RESTful APIs for smooth integration across multiple platforms.
- Implemented unit testing and automated testing for software code, ensuring 98% bug-free releases, improving code reliability by 20% for smoother user experience.
- Hands-on experience with machine learning, NLP, and deep learning frameworks to develop predictive models and automated analytical workflows.
- Managed version control and CI/CD pipelines to streamline deployment and reduce manual errors.

Technical Skills:

- **Languages & Databases:** SQL, Python, R, PostgreSQL
- **Visualization & BI Tools:** Tableau, Power BI, Looker
- **Data Analysis:** Data Cleaning, Data Manipulation, Data Storytelling, KPI Reporting
- **Tools:** Excel (Advanced), PowerPoint, SAP, Jupyter Notebook
- **Big Data & Cloud:** BigQuery, Hadoop, Spark, AWS, Azure, Databricks
- **Techniques:** Predictive Modeling, Statistical Analysis, A/B Testing, ETL
- **Other:** Communication, Collaboration, Time-Tracking, Written skills

Education

Masters in Science (M.S.), Computer Science(STEM)

New Jersey Institute of Technology

New Jersey, USA

Major: Data Analytics / Database management / Data Mining

Bachelors in Technology (B.Tech.), Computer Science

Jawaharlal Nehru Technological University

Hyderabad, India

Major: Data Analysis / Statistics

Personal Project (University)

AI-Powered Customer Intelligence & Churn Prediction Platform

Tech Stack: Python, SQL, Azure Data Factory, Azure Data Lake, Power BI, Scikit-learn, TensorFlow

- Designed and developed an end-to-end machine learning solution to predict customer churn and improve retention strategies in a cloud-based analytics environment.
- Built scalable ETL pipelines using Azure Data Factory and Azure Data Lake to process and transform large customer behavioral datasets.
- Developed predictive machine learning models using Python, Scikit-learn, and TensorFlow, improving churn prediction accuracy by 25%.
- Performed feature engineering, statistical analysis, and customer segmentation to identify high-risk user groups and business opportunities.
- Created interactive Power BI dashboards for real-time monitoring of customer engagement metrics, churn trends, and KPI performance.
- Automated reporting and analytical workflows using Python and SQL to improve operational efficiency and reduce manual processing time.
- Presented actionable insights and AI-driven recommendations to stakeholders to support strategic decision-making and retention planning.
